

# Point-HD iPad Interface User Guide

---

## Point-HD Control via an iPad

This guide is intended for users who wish to use the iPad as a touch screen interface with the Point-HD.

### System Concept

The Point-HD (VGA) user interface is replicated onto the iPad(s) via wireless datalink which allows the presenter to interact with the Point-HD system via the iPad touch screen.

This has a number of advantages, the main one being that the presenter can be mobile around the TV set or stage.

### **Items Required**

Point-HD or Point-HD Trainer system

Wireless Router N Type with Hi Speed WiFi Performance

iPad2

VNC Server application (UltraVNC)

VNC Pocket Office Pro application

### **Installation and Setup**

Connect Point-HD computers Gigabit Ethernet port directly to the router using CAT5/6 cable.

Assign a static IP address to the Point-HD Computer via the routers MAC address setup.

Download and install the VNC server application to run on the Point-HD computer, ensure that the VNC servers ports are set as per the defaults.

Purchase the VNC Pocket Office pro application via iTunes and install that onto the iPad2.

On the routers setup, assign the VNC server and its default port numbers to the Point-HD's static IP address.

Launch the VNC Pocket Office Pro on the iPad2 and enter the IP address of the Point-HD computer as a connection, once connected you are good to go with controlling Point-HD via the iPad2.
